

I have a satellite radio in my car and I recently installed one in my wife's car. We live in Houston, TX where traffic is a top consideration with regard to scheduling for business, personal, or recreational activities. With the addition of local traffic broadcasts via XM Satellite radio I can now quickly listen and alter my course depending on accidents and construction closings. I can specifically recall three times in which I not only avoided a traffic accident but still managed to arrive at a business meeting on time. When I tried to get traffic reports via FM radio it was untimely and inaccurate. Bottom line traffic reports on FM radio add no value to the Houston commuter. As you can see I feel very strongly that XM Radio's local traffic is not only a great time saver but also a productivity tool. If everyone had this service in their cars, there would be an increase in productivity due to a decrease in travel time. In a city like Houston that is worth
